DS UNIVERSE

INTRADAY FUTURES INTELLIGENCE

INTRADAY TRADERS — PRECISION FROM ORBIT

• WHAT THE RADARS DO — 01

The tape talks. The Radars translate.

DS Radars are live read-outs that turn raw order flow into a plain-language verdict. Three instruments work the same chart from different angles — **Pilots** reads direction and conviction, **Sweeper** hunts traps and liquidity, **Everguard** grades the integrity of every move. Cross-referenced, multi-timeframe, and rendered without a hint of lag, so the read is always current and always trustworthy.

DS Pilots

Two co-pilots fly the tape. **Sammy** reads it conservatively, **Freddy** aggressively — and the panel fuses their votes into one headline call with a confidence score, a live buyers-vs-sellers pressure gauge, and a regime state machine that tracks the move from stable to exhausting to sweeping. You get a full directional read **and** its context, in one glance — never a single biased signal.

Two minds, one verdict

Sammy and Freddy weigh the tape independently, so you always see both the cautious and the aggressive read.

Live pressure gauge

A real-time buyers-vs-sellers split shows who actually controls the move, right now.

Regime state machine

Stable → Exhausting → Confirming and Consolidating → Expanding → Sweeping — the move's phase, named.

Killzone aware

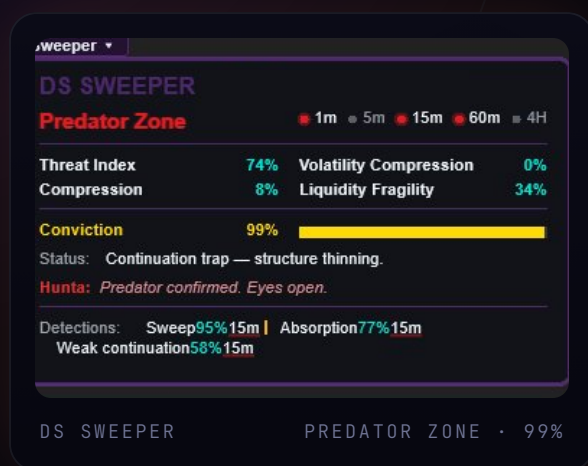

London, Tokyo and New York windows light up so you know when the session has teeth.

WHAT IT GIVES YOU

Direction and conviction, **fused into one call** you can read in a heartbeat — never a lone, biased signal.

DS Sweeper

Codename **Hunta**. Sweeper watches for the moves that fool everyone else — sweeps, absorption, fake breakouts, and weak continuations. A Threat Index and Conviction bar quantify the danger while a plain status line calls it for what it is: **“Continuation trap — structure thinning.”** When **Hunta** says **“Predator confirmed. Eyes open,”** you see the trap before it springs — and know when strength is really fatigue.

Traps, named on sight

Sweep, absorption, fake breakout and weak continuation are each detected and labelled with a live confidence.

Threat & conviction

A Threat Index plus a Conviction bar tell you how real the danger is, not just that it exists.

Structure read

Status lines like “calm surface, pressure rising” expose what the candles are hiding.

Hunta’s call

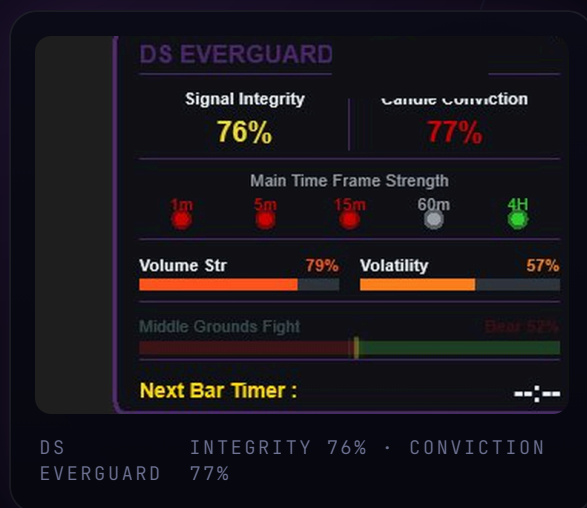

One sharp line per bar — “the trend wears a mask” — so the warning lands instantly.

WHAT IT GIVES YOU

See the trap before it springs — and know when **strength is really fatigue** and a quiet tape is about to break.

DS Everguard

Everguard grades trust. It scores **Signal Integrity** and **Candle Conviction** in real time, then lines up Main Time Frame Strength from the 1-minute to the 4-hour so you can see, at a glance, whether the whole board agrees. Volume Strength, Volatility and a Middle Grounds bull-vs-bear tug round out the picture — with a Next-Bar timer keeping you in rhythm. It answers the only question that matters: **can I trust this move?**

Integrity score

A live read on whether the current move is the real thing or a low-quality fake-out.

Candle conviction

How much force is behind each bar — strong closes look different from hollow ones.

Every timeframe at once

1m, 5m, 15m, 60m and 4H strength dots reveal alignment or conflict in a single row.

Middle Grounds Fight

The live bull-vs-bear tug shows who's winning the contested ground in real time.

WHAT IT GIVES YOU

One question, answered live and across every timeframe: **can I trust this move?**

The edge

Accuracy you can lean on, speed you never feel, and a chart that gets out of the way the second you need it to.

Accuracy

Every metric is cross-referenced across five timeframes and normalised per signal type before it's shown. Corroborated reads, not lone guesses.

Lag-free

Fonts cached once, a single shared draw brush, no per-frame allocations and no LINQ in the render loop. Heavy intelligence, zero drag on a live tape.

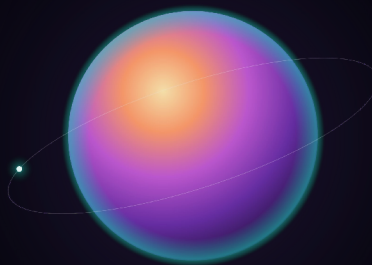

Panel flips

Each radar collapses to one tab with a click. Flip them away to lock in on price, flip them back for the full read — your call, instantly.

FLIP TO LOCK IN

Same chart, two states. When you want the whole read, the Radars are there. When you need to **lock in and just trade price**, one click clears the deck — nothing to delete, nothing to reload.

DS UNIVERSE

INTRADAY FUTURES INTELLIGENCE

• DS UNIVERSE •

See everything. Miss nothing.

Three radars reading the same tape, agreeing before they speak,
and stepping aside the moment you need pure price. That's the DS
Radar edge — intelligence that never gets in your way.

For the intraday trader — **precision from orbit.**
